[http://wa-acte.org/  
upcoming](http://wa-acte.org/upcoming)

\$350  
WA-ACTE Member  
\$425 Non-Member  
\$50 additional after  
10/15/18

Join us for a pathways approach on how to imbed academic standards associated to your program and classroom through various teaching practices, tools, and curriculum that work for good learning and teaching.

Please consider sharing a presentation this fall and share the good work you may be doing in these areas.

### Dr. Michael A. DiSpezio

Michael infuses his high-energy style of engagement into the development and production of STEM-centric material. He’s a renaissance lecturer and educator who presents globally to a diverse audience on topics that range from “Becoming a Better Thinker” to “Re-engineering the 21st Century Science Classroom” to his National Geographic stage experience GeoMania!

### Virtual Reality in the Classroom - The time has arrived!

Astonishing. Mind-boggling. Unreal. Enter the virtual universe and be transported to a landscape of limitless teaching possibilities. With a modest investment, educators can guide students through a self-directed exploration of virtual settings that range from the inner structure of living cells to the surreal landscapes of alien worlds. Imagine escorting a class through a focused job shadow related to your program! To learn more, join Michael for an engaging and nonintimidating introduction to virtual reality (VR), during which you’ll discover what you’ll need to journey into this virtual world.

*Houghton Mifflin Harcourt will be supplying cardboard viewers for all those attending the conference keynote.*
